

HEALTH CARE MANAGEMENT ABROAD POLICY

(APPROVED BY DEAN'S COUNCIL 2.12.2020)

In conforming to best practices in education abroad and to ensure students are adequately prepared to meet their health care needs while abroad, all students intending to study abroad must meet with a licensed health care professional(s) to complete TU's Education Abroad Health Clearance Form. Once medical clearance is received from the necessary health care professional(s), the student must provide the Center for Global Engagement (CGE) the completed/signed form from the health care professional(s). Furthermore, the Center for Global Engagement requires all students planning to study abroad to obtain clearance through the offices of Dean of Campus Life and Counseling and Psychological Services prior to participating in education abroad. These clearances are required so that, where necessary, there are plans in place to meet students' needs and ensure their success. In the event the student does not receive clearance to study abroad from the necessary licensed health care professional(s), the Office of the Dean of Campus Life, or the Office of Counseling and Psychological Services, or if a particular location cannot provide the required accommodations for a particular student, CGE reserves the right to deny approval to study abroad. If possible, CGE will work with students denied approval to study abroad to consider another location that can better accommodate the student, or to determine if there are other accommodations that may enable the student to participate in a particular program.
